HVAC Venting for Today's Building Envelope

At Primex, We Know Rain

A Building Envelope is Only as Strong as its Weakest Point

Operating around Canada's soggy West Coast has made us rainscreen experts by necessity. When the leaky condo crisis hit in the late 1990s we began working with building-science engineers and local HVAC contractors to set up a new standard.

Our goal? To better understand the relationship between something as simple as a roof vent and something as critical as the rainscreen.

After all, install the wrong roof vent or Wall Cap and that costly new rainscreen retrofit is doomed from the start.

So, this is the foundation we've built our product line on—maintaining the integrity of the building envelope.

Our simple, durable, and watertight HVAC solutions help keep buildings safe from leaks and water damage while ensuring proper, steady airflow.

This means our products are not only watertight and rainscreen compatible but are also capable of taking a beating from the elements.

Damaged, worn, or cracked vents and caps put the building envelope at as much risk as improper installation. Specially formulated polymer resins and carefully engineered molded designs have made our line of plastic products UV-proof, impact resistant, and warp resistant.

They never rust, won't dent when hit by an "errant" hockey puck, and retain their like-new colour for years and years.

In fact, at peak performance, we're proud to say our exterior plastic HVAC vents are designed to last for more than three decades.

Why Plastic is Stronger Than Metal

When it comes to choosing vents for HVAC systems, consider some of the long term differences between metal and plastic.

Metal options are often made with multiple leaky seams, can warp over time, dent easily, and if painted will chip or scratch.

Primex plastic HVAC venting options, by contrast, offer many advantages. Here are six of them.

1. WEATHER AND SUN RESISTANCE

Anything on the outside of a building is going to take a beating. Roof vents, Wall Caps, and soffit vents are no different. Powerful UV rays break down unprotected materials over time, causing them to weaken, while hail serves as a battering ram.

Special polymer resins are used in all Primex plastic vents and caps. These keep our products UV-proof so they stay strong and their colour stays sharp. Corrosion-free plastic is also a great choice for wet environments where even galvanized metal will eventually rust, especially if it sustains some light damage.

2. ENHANCED RAINSCREEN COMPATIBILITY

Primex plastic vents and caps are designed to be fundamentally waterproof from the inside out. To eliminate joints and seams our products are made with molded one-piece bases or hoods—depending on the application.

Oversized flanges help create better seals and built-in drip edges help direct water away from the unit. Our vents and caps also come with adapters and extensions that specifically

accommodate the cavity of a rainscreen protected building, ensuring tight seals between the vent and duct.

3. GREATER PEST CONTROL

There's no greater luxury for a cold bird or rodent than an unprotected roof vent. Bird screens on plastic roof vents are molded straight into the unit, so they're not liable to being pulled off at the seams, as in screened metal vents.

4. WHISPER QUIET OPERATION

Plastic dampers and housings operate without the typical clank and clang of metal dampers housed in metal vents. Made from engineered one- and two- piece molds, plastic vents, grilles, and registers are less likely to suffer the harmonic "humming" of their metal counterparts.

5. GREATER COLOUR SELECTION

Plastic Wall Caps and vents are available in a wide variety of colours to match any building's unique palette. Colour dye additives also form an integral part of the entire molded piece, meaning scratches will be less apparent than on painted metal vents or caps.

6. LIGHTWEIGHT AND NO SHARP EDGES

When you're working on a roof or in a hard to reach spot, a lightweight product that doesn't feature the hazardous sharp edges found on most metal vents makes a big difference. Primex plastic products are lightweight and made with clean curved edges to prevent serious injury.

COLOUR GUIDE

Primex Roof Vents

Eliminate leaks and maximize water protection

Year after year roofs take a beating—from rain, snow, sun, and pests. Primex plastic roof vents offer durable, watertight solutions that keep homes safe from damaging leaks, birds, and rodents while maximizing proper airflow.

ONE-PIECE MOLDED PLASTIC DESIGN

When it comes to joints and seals it's only a matter of time before water finds a way in. That's why Primex plastic roof vent hoods are molded in one piece—without seams and joints—ensuring a watertight installation every time.

BUILT-IN BIRD SCREEN

An unprotected roof vent is the equivalent of a 5-star hotel to a cold and homeless bird or rodent. And once they're in—either restricting or completely blocking proper airflow—they're not easy to get out. Primex roof vents are made with rugged, integrated bird screens to keep pesky, unwanted guests out for good.

IMPACT-RESISTANT/SUN-PROOF

- Long-lasting durability with specially formulated durable UV-protected polymer resin that's also impact resistant.

VERSATILE

- Multiple colours, sizes, and styles. Choose a low-profile vent for windy environments or a gooseneck vent for maximum snow clearance. All roof vents have a 4" flange.

EASY TO INSTALL

- Plastic designs are lightweight, adaptable across a range of sizes, and free of hazardous sharp edges, making them easy to install in hard-to-reach spots.

New plastic resins – like polypropylene – are much more durable so they can resist hail and heavy snow, or even flying baseballs or hockey pucks! Metal vents, whether they are aluminum or galvanized, are prone to rust. Plastics, on the other hand, can be fully immersed in water.

HVAC VENTING

Roof Vents

PRODUCT MODEL CODE

RV20 Kit

Low-Profile Roof Vent

The Primex Low-Profile Roof Vent (RV20) is built for the through-roof exhaust of dryers, bathroom and kitchen fans, stove vents, and intake for furnaces, fresh air make-up, and attic venting.

This patented, durable, watertight roof vent is easily installed and adapted to fit 4, 5 or 6-inch ducting for an aesthetically-pleasing, perfect fit every time.

DIMENSIONS

Hood Size: H: 6.5" / W: 7" / D: 4.9"

FEATURES & BENEFITS

- Patented design eliminates leaky joints and maximizes water protection with one-piece molded hood and oversized 4" flange.
- Aesthetically-pleasing, low-profile styling.
- Molded-in screen to prevent bird and rodent infiltration.
- Long lasting durability with UV-protected, impact-resistant polymer resin.
- Compatible with 4, 5 or 6-inch ducting with included RV456 easy snap-in adapter.
- Simple intake/exhaust conversion via removable damper.
- Quick and easy installation with installer-friendly packaging (vent/adaptor bagged together).
- **NOTE:** For dryer applications use 'no screen (NS)' model.

RV20				
PART #	FREE AREA	COLLAR SIZE	DESCRIPTION	PKG
RV20KIT	20.9"	4, 5 & 6"	Roof mount: intake/exhaust vent with screen, damper, RV45 adapter	10/box
RV20KITNS	21.4"	4, 5 & 6"	Roof mount: intake/exhaust vent W/O screen for dryer venting	10/box

The Primex Goose-Neck Roof Vent (RV28) is built for the through-roof exhaust of dryers, bathroom and kitchen fans, stove vents, and intake for furnaces, fresh air make-up, and attic venting.

This patented, seamless, watertight roof vent is easily installed and features a five-inch snow clearance. It can be adapted to fit 4, 5, 6, 7 or 8-inch ducting (with optional adapter) for a perfect fit every time.

DIMENSIONS

Hood Size: H: 15.7"/W: 15.3"/D: 9.5"

FEATURES & BENEFITS

- Provides all-weather ventilation with 5" of additional height for snow clearance and prevents ice damming.
- Maximize inventory turns with single hood size and separate 4 to 8-inch easy snap-in adapters.
- Patented design eliminates leaky joints and maximizes water protection with one-piece, molded hood and oversized 4" flange.
- Ensures watertight installation with oversized flange.
- Resists damage from sun and hail with UV-protected, impact resistant polymer resin.
- Simple intake/exhaust conversion via removable damper.
- Matches 28 Series with the same adapter, including RVL28, WC28, SV28.
- **NOTE:** For dryer applications use 'no screen' (NS) model.

PRODUCT MODEL CODE

RVL28

Low-Profile Large Roof Vent

The Primex Low-Profile Roof Vent (RVL28) is built for the exhaust of dryers, bathroom/kitchen fans, stove vents, and intake for furnaces, fresh air make-up, and attic venting.

The standard configuration of the RVL28 comes with a removable screen and damper. The 4 to 8-inch adapters are sold separately.

DIMENSIONS

Hood Size: H: 10" / W: 10.6" / D: 4.6"

FEATURES & BENEFITS

- Enhances aesthetics with low profile that blends in with roof.
- Maximize inventory turns with single hood size and separate 4 to 8 inch easy snap-in adapters.
- Eliminates leaky joints and maximizes water protection with one-piece, molded hood and oversized 4" flange.
- Oversized flange ensures watertight installation.
- Long lasting durability with UV-protected, impact resistant polymer resin.
- Intake/exhaust conversion via removable damper.
- Matches 28 Series with the same adapter, including RVL28, WC28, SV28.

▪ **NOTE:** For dryer applications 'No screen (NS)' model.

Primex Wall Caps

Keep your rainscreen watertight and leak free

Effective rainscreen is vital for maintaining the integrity of a building. But even after this expensive process, installing the wrong Wall Caps can leave the building envelope just as vulnerable to costly leaks and water damage as before.

Every Primex Wall Cap model features a unique 1.5" extended base that accommodates the gap between the sheathing and cladding of a rainscreened building. This helps eliminate leaks and ensures the integrity of the building envelope by enabling a tight seal between the exterior vent and interior duct.

WATERTIGHT DESIGN

As with the hoods of Primex roof vents, the bases of our Wall Caps are molded in one piece. This means no seams or joints for water to creep through. Coupled with a built-in drip edge and oversized interior flange, each cap is fundamentally watertight from the inside out. The removable hood can be cleaned without compromising the buildings rainscreen.

EXTENSIVE COLOUR SELECTION

Appearance matters and every building has its own unique personality. Molded plastic designs come with the added benefit

of a wider range of colours to choose from. And because the colour dye is added during the manufacturing process it means scratches and day-to-day wear will be less apparent than with painted metal Wall Caps.

RAINSCREEN-COMPATIBLE

- An extended base on every model accommodates the rainscreen cavity, ensuring a watertight seal between sheathing and cladding.

VARIETY OF CHOICE

- Choose from low profile vents for streamlined aesthetics or enhance airflow without increasing the number of leak-prone edges by selecting a double- or triple- vent unit.

ENHANCED DURABILITY

- Made with a specially formulated polymer resin that's UV-protected and impact-resistant.

WC Series - Range Hood Vent

WCL - Low Profile Wall Cap (available only in 7" or 8")

Wall Caps

PRODUCT MODEL CODE

WC Series

Intake and Exhaust Wall Cap Vents

The Primex Wall Cap Series (WC) is ideal for exhaust and intake applications. This includes the through-wall exhaust of dryers, bathroom kitchen fans and stove vents, and the intake for furnaces and fresh air make-up.

This rainscreen-compatible series comes in sizes ranging from 3 to 8 inches and in multiple colours.

FEATURES & BENEFITS

- Compatible with rainscreen applications via extended base, accommodating the cavity between the sheathing and cladding.
- Patented design eliminates leaky joints while maximizing water protection with one-piece molded base and built-in drip edge.
- The integrity of the building envelope is maintained via a removable hood for simple cleaning or replacement.
- The removable damper makes it suitable for intake and exhaust applications.
- Over-sized flange ensures water-tight installation.
- Made with UV-protected durable polymer resin.
- Highly resistant to mechanical impact and includes a built-in bird screen.
- Quick and easy installation.
- NOTE:** For dryer applications use 'no screen (NS)' model.

Wall Caps

PRODUCT MODEL CODE

WCX Series

Extended Brick Wall Cap

The Primex Extended Brick Wall Cap Series (WCX) increases the depth of the Wall Cap for use on the outside of brick and masonry structures. Maintain a consistent look throughout your Wall Caps when paired with the WC Series for non-brick applications.

Available in 4, 5, and 6-inch duct sizes, this rainscreen compatible unit provides excellent, long term water protection.

DIMENSIONS

Hood Size: H: 7.8" / W: 8.1" / D: 4.5"

FEATURES & BENEFITS

- Suitable for brick and masonry walls and intake or exhaust applications.
- Compatible with rainscreen applications via extended base, accommodating the cavity between the sheathing and cladding.
- Patented design eliminates leaky joints, while maximizing water protection with one-piece molded base, built-in drip edge and oversized flange to ensure water-tight installation.
- The integrity of the building envelope is maintained via a removable hood for simple cleaning or replacement.
- Made with UV-protected durable polymer resin.
- Highly resistant to mechanical impact and includes a built-in bird screen.
- Quick and easy installation.
- Hoods match WC Series Wall Caps.

Wall Caps

PRODUCT MODEL CODE

WCI
Wall Cap Intake

The Primex Wall Cap Intake (WCI) has been designed with many of the weather beating features as our WC series of Wall Caps. This air intake unit incorporates the best features of our patented Wall Cap with a low-profile intake hood.

Designed to work as an intake vent for furnaces, gas appliances, fireplaces, hot water tanks, air conditioners and anywhere else fresh air make-up is required. Available in 5 or 6 inches.

DIMENSIONS

H: 9.9" / W: 11.9" / D: 1.5"

FEATURES & BENEFITS

- Compatible with rainscreen applications via extended base, accommodating the cavity between the sheathing and cladding.
- Eliminates leaky joints while maximizing water protection with seamless base and built-in drip edge.
- The integrity of the building envelope is maintained via a removable grille for simple cleaning or replacement.
- Over-sized flange ensures water-tight installation.
- Made of durable UV-protected durable polymer resin.
- Highly resistant to mechanical impact and includes a built-in bird screen.
- Quick and easy installation.
- **NOTE:** Ideal for intake applications where it is sheltered by a soffit.

Why Plastic?

COMMON TYPES OF PLASTICS

The two most common resins used in injection-molded products are polypropylene and polystyrene. While both of these feature similar characteristics such as strength, aesthetics and ease of recyclability, they do differ in some key characteristics.

POLYPROPYLENE: Wall caps, soffit vents and roof vents require more durable, flexible and Ultraviolet-tolerant (UV) plastic. polypropylene offers long-term environmental protection and durability.

POLYSTYRENE: Polystyrene is more rigid than polypropylene and as such isn't as vulnerable to warping from heat. With applications that handle heated airflow such as return air grilles and registers, polystyrene offers excellent heat durability at low cost.

Both polypropylene and polystyrene are quickly manufactured for fast turnaround and they are both lightweight, which can reduce shipping costs and increase ease-of-installation.

Plastics are also easily modified during installation. Need to trim of an edge or round a corner to fit with a baseboard? Modifications are quick and easy with plastics.

- DURABLE
- LIGHTWEIGHT
- RUST-PROOF
- HEAT-RESISTANT
- AESTHETICALLY-PLEASING
- AFFORDABLY PRICED

The Primex Low Profile Intake and Exhaust Vents (WCL Series) eliminate leaky joints while maximizing water protection with a one-piece molded base and built-in drip edge.

These vents feature an attractive low profile design and fit 7" and 8" diameter ducts.

PRODUCT DIMENSIONS

Hood Size: H: 10.25" /W: 12.3" /D: 1.7"

FEATURES & BENEFITS

- Compatible with rainscreen applications via extended base, accommodating the cavity between the sheathing and cladding.
- Enhances aesthetics with low profile that blends with the installation location.
- Suitable for intake and exhaust applications where a low profile is preferred.
- Over-sized flange ensures water-tight installation.
- The integrity of the building envelope is maintained via a removable grille for simple cleaning or replacement.
- Made with UV-protected durable polymer resin.
- Highly resistant to mechanical impact and includes a built-in bird screen.
- Quick and easy installation.

WCL8	50.3"	Low profile WC, 8" dia. duct	4/box

5 Ways Primex Wall Caps Protect the Building Envelope

1. EXTENDED BASE FOR A TIGHTER SEAL
The WC Series of Primex Wall Caps come with a 1.5" extended base (5" for brick), which accommodates the cavity in between the sheathing and cladding of a rainscreened building. This ensures a tight, firm seal with no gaps between the exterior vent and internal duct.

2. BUILT-IN DRIP EDGE AND DRAINAGE CHANNEL
For added protection, our Wall Caps are molded with built-in drip edges and drainage channels to efficiently move water away from the vent and building.

3. PATENTED REMOVABLE HOOD
Easily removable hoods make cleaning and maintaining our Wall Caps quick and easy—all without breaking the seal of the building envelope.

4. OVERSIZED MOUNTING FLANGE
To increase the degree of water protection and decrease the possibility of leaks due to poor sealing, our Wall Caps are designed with oversized mounting flanges for greater overlap.

5. SINGLE PIECE BASE
Unlike most metal alternatives, our molded one-piece bases mean no seams or joints for water to find, exploit, and slowly creep its way through.

PRODUCT MODEL CODE

SM Series

Surface Mount Wall Vents

The Primex Surface Mount Wall Vent (SM Series) is the perfect replacement for existing bathroom or range hood exhaust terminations. The SM Series is easy to install and aesthetically-pleasing.

The seamless, low-profile, one-piece design accommodates standard 4-6 inch ducting. UV-stabilized polymer resin offers long-lasting protection while reducing leaks.

FEATURES & BENEFITS

- Eliminates leaky joints while maximizing water protection with one-piece, seamless design.
- Suitable for intake and exhaust applications via removable damper.
- Spring loaded damper reduces wind flapping.
- Made with UV-stabilized durable polymer resin.
- Highly resistant to mechanical impact.
- Surface mounted for quick and easy installation.
- Removable screen for dryer venting applications.

PRODUCT MODEL CODE

WC4xxNS

Rain Screen Dryer/Exhaust Vent

HVAC VENTING Wall Caps

The Primex Dryer/Exhaust Vent (WC4xxNS) is a screenless solution for 4-inch dryer duct venting. This rainscreen compatible vent eliminates leaky joints through its one-piece base and built-in drip edge.

A removable hood allows for easy cleaning or replacement.

DIMENSIONS

Hood Size: H: 5.6" / W: 5.6" / D: 3.1"

FEATURES & BENEFITS

- Compatible with rainscreen applications via extended base, accommodating the cavity between the sheathing and cladding.
- Eliminates leaky joints while maximizing water protection with one-piece molded base and built-in drip edge.
- The integrity of the building envelope is maintained via a removable hood for simple cleaning or replacement.
- Suitable for intake and exhaust applications.
- Over-sized flange ensures water-tight installation.
- Made with UV-protected durable polymer resin.
- Highly resistant to mechanical impact.
- Quick and easy installation.
- Adaptable to dryer venting applications.
- No-screen models are available from 3-8" (refer to page 9)
- **NOTE:** Can be used as surface mount retrofit.

DV4

Dryer/Exhaust Vent

HVAC VENTING Wall Caps

The Primex Dryer/Exhaust Vent (DV4) is a surface-mount, durable, and aesthetically-pleasing solution for venting residential dryers.

The low-profile, one-piece design accommodates standard 4-inch ducting. UV-stabilized polymer resin offers long-lasting protection while eliminating leaky seams on the vent hood.

DIMENSIONS

Hood Size: H: 7.1" / W: 7.1" / D: 3.3"

FEATURES & BENEFITS

- Low-profile, surface-mount one piece design.
- Accommodates 4" ducting.
- No leaky seams on the vent hood.
- Made from UV-stabilized polymer resin.
- No screen to allow for lint exhaustion.
- Durable, long-lasting.

Primex Soffit Vents

Vent your soffit while eliminating pests and leaks

Clanging metal dampers, trespassing rodents, clogged air vents, and unexplained heat loss in the home can often be traced back to the selection and installation of the wrong soffit vent.

Primex plastic soffit vents come in a variety of sizes and styles to suit the unique needs of each particular installation. Removable plastic dampers reduce noise, keep out pests, and allow vents to be easily switched over for intake usage.

VERSATILE AESTHETICS

Low profile and unobtrusive, Primex soffit vents blend in and operate quietly. Their simple design and neutral colours compliment the look of any building.

LEAK-PROOF DESIGN

Molded one and two-piece plastic designs mean Primex soffit vent hoods have no seams, providing maximum water protection.

RUSTPROOF AND SUN-PROOF

- Specially formulated polymer resin provides enhanced protection from damaging UV rays, and rustproof plastic design ensures long-lasting durability.

QUIET OPERATION

- Unlike the sharp clangs experienced with their metal counterparts, plastic soffit vents with plastic dampers provide steady, quiet airflow.

HVAC VENTING Soffit Vents

PRODUCT MODEL CODE

SV Series
Soffit Vent Series

The Primex Soffit Vent Series (SV Series) consists of low-profile, durable exhaust solutions for a range of applications.

The UV-stabilized, one-piece design eliminates leaky seams. A one-way damper prevents rodents and debris from entering the home while effectively exhausting moisture.

The SV Series offers two models for standard 4 or 5-inch ducting and an aesthetically-pleasing termination.

FEATURES & BENEFITS

- Low profile, one-piece design is less obtrusive than traditional vents.
- Choose from two different models for either 4" or 5" ducting.
- Can be used in new or retrofit applications.
- No need to penetrate the roof or walls.
- No leaky seams on the vent hood.
- Made from durable, UV-stabilized polymer resin.
- Lightweight and easy to install.
- Available in Snow White and Taupe.

COLOURS

- Snow White (01)

EXTERIOR VENTING PRODUCTS

Soffit Vents

The low profile of the SV series vents make them ideal for tucking away under the soffit. The smooth curves help to push air out and away from the soffit, dispersing moisture away from the building.

The SV28 series is adaptable for 4-8 inch ducting, making it particularly useful for venting larger range hoods.

Roof Jacks

Primex offers a variety of roofing vents designed for extreme weather protection. Large flanges and seamless mould design protect from leaks and durable, engineered plastic resin provides UV protection and resists denting.

The RV28 Gooseneck provides 5 inches of snow clearance, while the RV20 Kit comes with a 4/5/6 inch step up adapter and offers low profile, pleasing aesthetics.

Wall Caps

The WC series of Wall Caps are the simply the best in the business. With oversized flanges, and seamless design they protect from moisture like no other vent. The patented removable hood means you can clean the duct without compromising the building envelope. High quality, durable resin provides long life and protection from fading, cracking and dents.

Engineered for rainscreen compatibility the WC series is available in a variety of colours and configurations. Options for brick facades, range hood ducting, flat or curved hood, intake or exhaust, 4-8 inch duct compatibility and multi-cap configurations make the WC series the most versatile wall vent in the industry.

Other

- Interior grilles, diffusers and registers in a variety of colours and sizes.
- Trim plates for light fixtures, hose bibs and electrical outlets.
- Gutter accessories - mitre corners, downspout tile covers and leaf strainers.

ENVELOPE AND HVAC SYSTEMS MEET

NO OTHER HVAC VENTING COMPANY KNOWS MORE ABOUT THE RELATIONSHIP BETWEEN THE BUILDING ENVELOPE AND HVAC SYSTEMS.

Living in a temperate rainforest on Canada's wet west coast, we've seen a lot of rain! We know how difficult and important it is to maintain the integrity of a building envelope under constant attack from moisture. Our range of engineered, rainscreen-approved plastic products stand up to almost anything Mother Nature can throw at them.

SOLUTIONS FOR ALL YOUR ACTIVE VENTING NEEDS

Clothes Dryer

The buildup of lint, mould and debris inside vents and ducts can restrict airflow. That causes appliances to operate inefficiently. It may also increase the pollutants in a home and degrade air quality. In the case of a dryer vent, lint can build up and create a significant fire hazard.

A well-designed vent includes a removable hood which allows a homeowner or contractor access to the duct behind it without having to disturb the building envelope.

Bathroom Fan

A bathroom vent should move air away from nearby passive vents, which could allow moisture to re-enter the home and gather in the walls or rafters. It should incorporate a one piece design, and form a watertight seal with the roof or wall material around it. Primex offers a range of vents for effectively exhausting moisture from the structure.

Range Hood

Installation of an exhaust fan above a stove is a critical step in creating safe and enjoyable kitchens. Ideally, those fans will exhaust smells, smoke, water vapour and other gases to the outside. The idea is simple, but choosing the right materials to include in your design is not always easy.

PRODUCT MODEL CODE

RDV Series

Round Soffit Vent Series

HVAC VENTING

Soffit Vents

The Primex Round Soffit Vent Series (RDV) is a versatile venting solution for either intake or exhaust applications.

This series comes in sizes ranging from 2 to 6 inches and provides a secure fit with UV-stabilized polymer resin.

Use with the Primex 4" Squeeze Elbow for installations where space is limited (RDV4S only).

FEATURES & BENEFITS

- Helps prevent peeling paint by removing moisture from wall cavities.
- Extra long collar for better hose or duct connection.
- Molded-in mesh bug screen.
- Secure friction fit.
- Made from durable, one-piece molded plastic.
- Quick and easy installation.
- Pair with optional Primex 4-inch Squeeze Elbow (EB4x90) for 2x4 stud installation.

Slab Duct Soffit Vent

HVAC VENTING

Soffit Vents

The Primex Slab Duct Soffit Vent (SV156) is a low profile, solution for slab duct venting. The seamless hood eliminates leaky joints and provides excellent water protection. The one-piece base fits most brands of slab duct. Building owners can realize substantial savings with fewer cleanings required than metal terminations.

PRODUCT DIMENSIONS

Hood Size: H: 5.25"/W: 12.5"/D: 2.5"

FEATURES & BENEFITS

- Molded one piece base.
- Fits most brands of slab duct.
- Removable damper for intake applications.
- Manufactured to replace the standard metal discharge hoods currently available.
- No need to penetrate the roof or walls.
- Low profile one-piece molded hood eliminates leaky joints and maximizes water protection.
- Made from UV-stabilized polymer resin.
- Hoods are easily cleaned or replaced.
- Quick and easy installation.

PRODUCT MODEL CODE

SV28

Soffit Intake and Exhaust Vent

The Primex Soffit Intake and Exhaust Vent (SV28) is ideal for 4 to 8 inch ducts that require venting with a damper.

This versatile unit allows for the termination of kitchen, bath, and dryer vents. The SV28 is designed to prevent pests, birds and rodents from entering the home. Multiple choices depending on the application: no-screened, with damper and screen, with screen only as intake, with damper and no screen as dryer vent.

DIMENSIONS

Hood Size: H: 10" / W: 10.5" / D: 4.375"

FEATURES & BENEFITS

- Low profile, one-piece molded hood eliminates leaky joints and provides maximum water protection.
- Vents odor and moisture away from the home.
- Optional screen and removable damper.
- Available for intake or exhaust applications.
- Optional snap-in adapters ensure a tight seal.
- Quick and easy to install.
- Made with UV-protected durable polymer resin.
- Available in Snow White and Taupe.
- Matches 28 Series, including RVL28, WC28, SV28.
- **NOTE:** For dryer applications use 'no screen' (NS) model.

Primex Grilles/Registers/Diffusers

Finish ducts and vents with clean whisper quiet outlets

Return-air grilles, heat registers, and air diffusers should blend in seamlessly and noiselessly with the rest of the interior, as if they are not even there. Primex plastic grilles, registers, and diffusers won't warp from heat and, unlike metal, won't produce a harmonic 'hum' noise.

DURABLE AND HEAT-RESISTANT

Primex registers, grilles and diffusers are made with heat-resistant polystyrene, which ensures they stand up to the high temperatures in HVAC ducts. This prevents warping and increases durability.

CHOICE OF STYLES

Ultra-thin flushmount grilles and slightly thicker baseboard grilles are available for return-air applications, while heat registers are available in either classic or designer styles.

EASY TO INSTALL

- Preset collars and 90° squeeze elbows make installing any size of diffuser quick and easy even in tight spaces, while return air grilles come with included screws.

MULTIPLE SIZES

- Choose from 22 different sizes of return air grilles, 9 different sizes of heat registers, and 5 different sizes of ceiling diffusers.

WHISPER QUIET

- Specially engineered Return Grilles with molded plastic design eliminate the harmonic 'hum' often associated with metal vents.

HVAC VENTING

Grilles

PRODUCT MODEL CODE

RG/B Series

Baseboard/Flushmount Return Grilles

The Primex Baseboard/Flushmount Return Grilles (RG/B Series) provides an aesthetically-pleasing finish to a range of return air applications.

Choose from 19 different sizes in flushmount or baseboard depth for a clean profile in Snow White colour.

Easy to install, easy to remove and clean, the RG/B Series offers a long-lasting HVAC venting solution in durable polymer resin.

FEATURES & BENEFITS

- Thirteen available sizes in 6", and nine available sizes in 8" heights.
- Two models: Flushmount (RG) 3/8" depth; Baseboard (RGB) 3/4" depth.
- Increased mounting strength with additional center screw hole on grilles 18" and larger.
- Eliminates harmonic noise hum often produced by metal grilles.
- Easy to remove and clean.
- Made from high-strength, durable polymer resin.
- Includes painted screws.

HVAC VENTING Diffusers

PRODUCT MODEL CODE

DC Series
Terminator Diffuser Collar

Terminator™ (DC Series) from Primex is a termination for round ducting and a collar for diffusers and grilles in air distribution systems. The strong, industrial-grade plastic is durable and lightweight.

Terminator is the solution to sloppy, inaccurate termination of HVAC ducting. This unique product is ideal for HRV, ERV, and in-line fan supply and exhaust terminations.

Simply hold it in place on the joist or stud and it attaches in seconds. The 90° back-stop ensures a level mounting position. Ducting fits over the top collar and the rigidity of the bottom circular opening ensures the diffusers and grilles stay snug against the finished surface.

PRODUCT DIMENSIONS

Sizes: 4", 5" and 6"

FEATURES & BENEFITS

- Quick and easy installation with no sharp edges.
- Can be used for ceiling or wall terminations.
- Preset for 1/2 and 5/8-inch drywall.
- 90° back-stop for a level, uniform installation with bottom flange for a permanent air seal.
- Off-set from joist for easy installation of ducting and clearance for application of tape or sealer.
- Duct-Stop-Point ensures no screws penetrate the collar and impede the insertion of the grille.
- A rigid bottom flange guarantees the drywall router tool conforms to the circular opening.
- V-shaped indentations on bottom edge for centering with previously installed fixtures.

Mounts on wood or metal.

301/401 Series

Single Drip Edge Trim Plates

The Primex Trim Plate Series (301/401) is a collection of bottom drip-edge finishing plates for electrical, plumbing, and custom applications.

The Series consists of five different models made of durable, impact-resistant polymer resin.

FEATURES & BENEFITS

- Excellent for door bells, HVAC pipes, electrical outlets, and water pipes.
- Eliminates leaky joints and maximizes water protection with two-piece mold, drip edge.
- Long lasting durability with UV-protected, impact-resistant polymer resin.
- Reduces chance of injury with no sharp corners or metal edges that can cut or scrape.
- 301R can use 201W for retrofit applications.

COLOURS

Trim Plates

PRODUCT MODEL CODE

501 Series

Double Drip Edge Trim Plates

The Primex Trim Plate Series (501) is a trio of rainscreen-compatible, double drip-edge finishing plates for electrical, plumbing, and custom applications.

It meets the stringent requirements of the Alberta Building code that pertains to the 'trimming out' of building envelope penetrations.

The Series consists of the 501B (blank, custom fit), 501R (rectangular cut, electrical), and 501T (round, plumbing).

FEATURES & BENEFITS

- Excellent for door bells, HVAC Pipes, electrical outlets, and water pipes.
- Eliminates leaky joints and maximises water protection with one-piece mold and top and bottom drip edges.
- The integrity of the building envelope is maintained with a seamless mold and oversized flange.
- Long lasting durability with UV-protected, impact-resistant, polymer resin.
- Reduces chance of injury with no sharp corners or metal edges that can cut or scrape.
- 501R can use 201W for retrofit applications or faucet or line sets.
- Meets code and saves time without having to form drip edge in the field.

COLOURS

- Snow White (01)

501T	8.5" x 12" x 1.25"	Outdoor hose bib	20/box

Gutter Accessories

Beat blockage and eliminate corner leaks

Gutters don't get enough credit. They're critical components in keeping a building safe from costly water damage and they take a relentless beating from the elements. Primex gutter accessories help keep vulnerable gutter joints watertight and narrow downpipes free from blockage while remaining durable and easy to maintain.

CLEAN FINISHING

Simple designs and clean one-piece molded designs blend seamlessly into the rest of your gutter system.

EASY TO MAINTAIN

Mitre corners snap in and out with ease and drop-in leaf strainers can be installed at ground level for easy cleaning.

UV-PROTECTED

- Primex gutter accessories are made with specially formulated UV-protected plastics that ensure long-lasting durability.

WIDELY COMPATIBLE

- Drop-in and ground-level leaf strainers are compatible with all sizes and shapes of standard downpipes and weeping tile.

About Primex

Established in 1971 and headquartered in Langley, British Columbia, Primex Manufacturing Ltd. (Primex) is a molder of plastic injection products.

From our roots as a small custom injection molder and through the combination of Primex's partner companies, Vanguard Plastics, Premo Plastics and VPL Enterprises Ltd., we have developed broad capabilities

in the design, engineering and mold fabrication of a number of proprietary, patented in-house plastic products.

We offer a full scope of products and services to meet the ever changing needs of both the HVAC and Construction industries.
